

Testimonials

"...I wasn't sure what to expect from Denta-Med. I used it for the first time and cried with relief that it brought, instantly calming and no stinging whatsoever!" **J. Turnbull, Vic**

"...a lady having treatment for breast cancer with severe intractable mucositis with no relief from standard products available. She is now ulcer free and stated she felt relief within hours of starting Denta-Med Gel, and within 2 days her ulcers had improved significantly." **ANUM, Yarra Ranges Health Day Oncology, Vic**

[Resident] refused to open her mouth for oral care, we used to put a little Gel on a spoon and offer it to her. She had a habit of rolling food around in her mouth & this she did with the Gel. A few weeks later she allowed us to clean her mouth with some Gel on gauze and a few weeks after that we were able to use a soft tooth brush... she changed from being an angry, worried looking lady to being a happy person who laughed readily. I felt that this was one of our major achievements in oral care. **FM, WA**

A few years ago I discovered Denta-Med on the internet. I started using it and after a short period of time the bad taste disappeared and it has changed my personality. I found myself starting to talk to people without hesitating and even getting up close to them without holding my breath until I turned away. I have become more outgoing and much happier within myself. Thank you for this wonderful life changing Gel. **R.R. Melbourne Vic**

DRY MOUTH Products

**ONE product for COMPLETE Oral Hygiene
and 8 Hour DRY MOUTH Relief**

**Denta-Med Gel provides up to
8 hours relief from Dry Mouth**

**Dry Mouth (Xerostomia) may affect people
experiencing -**

Hairy tongue

Gingivitis

Candidosis

Halitosis

A calming, soothing oral
Gel for superior oral hygiene for

Lichen Planus

Geographic Tongue

and other sensitive oral conditions

Denta-Med™

Oral Health Leads to Body Health

Testimonial Highlights

Denta-Med Mouth Gel is a whole mouth solution for a wide range of oral health issues.

It is also recommended for Dentures, Implants and other Dental Appliances to control and reduce infection.

Reported benefits from users include the following:

Cancer and Cancer Therapy

"...a lady having treatment for breast cancer with severe intractable mucositis with no relief from standard products available.

She is now ulcer free and stated she felt relief within hours of starting the product, and within 2 days her ulcers had improved significantly"

ANUM YRH Day Oncology, Vic

"Being a cancer patient & receiving chemotherapy every 3 weeks I found one of my symptoms to be a dry, irritated throat. I tried a few products & natural remedies until my oncology nurse gave me some samples of Denta-Med to try. What a difference it has made. I use it to brush my teeth then gargle twice a day & it has been fantastic. I found it eased my throat & made it easier for me to eat my usual foods. I will be using it for the remainder of my cancer treatment & beyond. It has literally been a lifesaver & I wished I had tried it earlier on in my treatment. Thank you so much!"

Cancer patient Eastern Health Vic

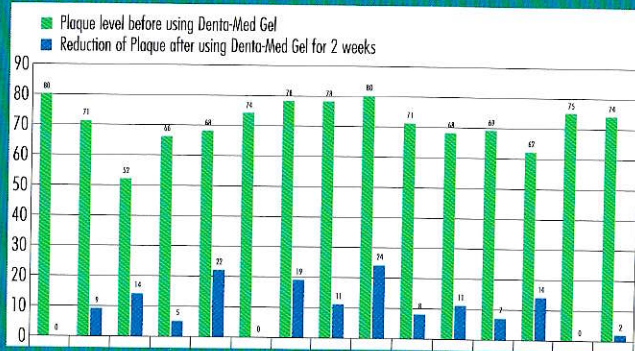

"There are very few over-the-counter pharmaceutical products that exceed the claims made by their manufacturer and Denta-Med is definitely one of them.

I really don't want to think about what we would have gone through had we not had the Denta-Med when my wife was going through treatment for Breast Cancer. Firstly we prevented infections, secondly, when nearly every chemo patient was suffering with a mouthful of ulcers, she had none and thirdly, she was spared the dry mouth effect and halitosis associated with both chemo and radiotherapy. Regular use of the Denta-Med gel throughout her treatment offered a significant level of comfort, making a very difficult experience a little more bearable. Use it!"

Rob Muir WA, October 2015

Research undertaken to determine the efficacy of Denta-Med Gel to control Gingivitis & reduce Plaque

Research conducted by Dr John McIntyre AM, BDS, PhD, FADJ, FICD, Visiting Research Fellow, Adelaide University (Acknowledgement to Dr Mulyani Dalidjan, Technical Officer; Dr P Zilm, Microbiologist)

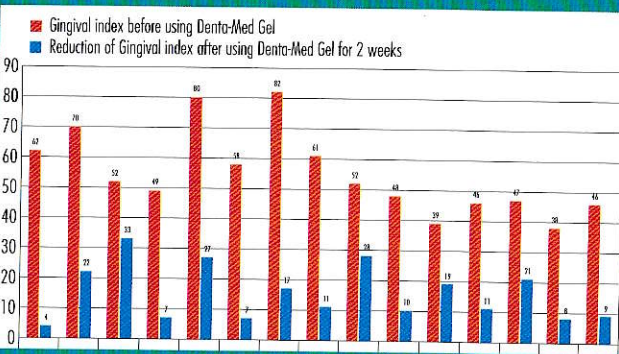

Trial of 15 patients

Selection criteria; Must have high Gingival & Plaque scores

Must have greater than 14 teeth.

Age range 23 - 81 years mix of males & females

Many experienced Xerostomia (dry mouth)

Summary Notes of Research

- These properties indicate that the Gel should be most effective for patients with a high oral disease risk, in particular of gingivitis and caries, and to reduce the risk of oral mucosal infections generally.
- The demonstrated properties indicate that it should be particularly beneficial for older and other medically compromised people both as a curative and a preventive agent.
- The demonstrated properties of Denta-Med would make it an ideal, safe, daily use preventive agent for all patients at risk of such systemic diseases, with no side effect risks from long term use which are often evident from long term use of chlorhexidine.

Mouth Ulcers

Hello, My name is John Hand, and I have had the misfortune of having mouth ulcers in varying degrees for the last forty years. Whenever I saw a different GP I would ask them if they knew of any treatment or cause of them, to no avail.

Over the last 2 years they have become much more frequent, and I have recently started with a new GP, and so I raised the Ulcer question with him. He tried some blood test with no useful results, and then suggested seeing a Gastroenterologist and so another series of blood tests again with no results, But, he referred me to a dentist specializing in this type of oral problem. She was very helpful and gave me several different products to try, one of these was Denta-Med gel in small caches for a trial. This was in late May, the next round of ulcers came in mid June 2016, and so I started brushing with Denta-Med, and after 2 or 3 days the ulcers were no longer painful and by another 2 days they were gone. Well you can imagine my delight. But wait, this may have been a coincidence, so after using all the caches, which lasted me about 3 lovely weeks, I stopped using the product, just to see if it really was Denta-Med that was providing the relief. The ulcers took about 2 to 3 weeks to start again, and so I started using the Gel again, and, after 3 days they were gone.

As a result I have purchased more of the product and intend using it permanently. Now I may have been lucky, that Denta-Med, seems to have been successful for me, but I would recommend that if you have been enduring mouth ulcers, give Denta-Med a try.

John Hand. August 2016

Oral Lichen Planus

I was diagnosed with OLP (oral lichen planus) in October 2015. I was having great difficulty with brushing my teeth as the toothpaste burned in my mouth and made it a twice daily torture session. On discussion with my Specialist she advised me that some of her patients had tried Denta-Med with fantastic results. What a blessing it has been. Since receiving my first six month supply I've not looked back, brushing my teeth is once again just a normal every day procedure without any associated pain. My OLP is still very active and unstable even with medication but having the Denta-Med option has certainly made life a little more bearable.
